corr_nn

Find ordered nearest neighbors based on correlation, assuming the absolute value of the correlation is monotonically decreasing with distance. Returns an n X (m + 1) matrix, each row indicating the m + 1 nearest neighbors including itself.

Description

Find ordered nearest neighbors based on correlation, assuming the absolute value of the correlation is monotonically decreasing with distance. Returns an n X (m + 1) matrix, each row indicating the m + 1 nearest neighbors including itself.

Usage

corr_nn(covmat, m)

Arguments

covmat	the covariance matrix
m	the number of nearest neighbors

Value

an n X (m + 1) matrix

Examples

```
library(RANN)
library(nntmvn)
set.seed(123)
d <- 3
n <- 100
locs <- matrix(runif(d * n), n, d)
covparms <- c(2, 0.01, 0)
covmat <- GpGp::matern15_isotropic(covparms, locs)
m <- 10
NNarray_test <- RANN::nn2(locs, k = m + 1)[[1]]
NNarray <- nntmvn::corr_nn(covmat, m)
cat("Number of mismatch is", sum(NNarray != NNarray_test, na.rm = TRUE))</pre>
```

nntmvn

Description

Draw Samples of Truncated Multivariate Normal Distributions

Draw one sample of the underlying GP responses for a partially censored Gaussian process using sequential nearest neighbor (SNN) method

Description

rptmvn

Draw one sample of the underlying GP responses for a partially censored Gaussian process using sequential nearest neighbor (SNN) method

Usage

```
rptmvn(
 у,
 cens_lb,
 cens_ub,
 mask_cens,
 m = 30,
 covmat = NULL,
  locs = NULL,
  cov_name = NULL,
  cov_parm = NULL,
 NN = NULL,
 ordering = 0,
  seed = NULL
```

Arguments

)

У	uncensored responses of length n, where n is the number of all responses
cens_1b	lower bound vector for TMVN of length n
cens_ub	upper bound vector for TMVN of length n
mask_cens	mask for censored responses (also locations) of length n
m	positive integer for the number of nearest neighbors used
covmat	n-by-n dense covariance matrix, either covmat or locs, cov_name, and cov_parms need to be provided
locs	location matrix n X d
cov_name	covariance function name from the GpGp package
cov_parm	parameters for the covariance function from the GpGp package
NN	n X m matrix for nearest neighbors. i-th row is the nearest neighbor indices of y_i. NN[i, 1] should be i
ordering	0 for do not reorder, 1 for variance descending order, 2 for maximin ordering
seed	set seed for reproducibility

rtmvn

Value

a vector of length n representing the underlying GP responses

Examples

```
library(GpGp)
library(RANN)
library(nntmvn)
set.seed(123)
x \leftarrow matrix(seq(from = 0, to = 1, length.out = 51), ncol = 1)
